

R U V N E T

Your AI Projects Are Failing.

87% of enterprise AI pilots never reach production.
RuvNet is the infrastructure that fixes that.

THE PROBLEM

The \$2.4 Trillion Problem

87%

of enterprise AI pilots
never reach production — Gartner

No orchestration

Who coordinates 50+ agents?

No memory

Agents forget between sessions

No security

Prompt injection undetected

No offline

No internet = no intelligence

AI vendors give you an engine. You still have to build the car, the road, and the traffic system.

THE GAP

What Every AI Provider Is Missing

They ship the model. You build the other 6 layers.

Capability	OpenAI	Anthropic	Google	RuvNet
Multi-Agent Orchestration	✗	✗	✗	✓
Persistent Memory	✗	✗	✗	✓
Vector Search (<100µs)	✗	✗	✗	✓
Security Middleware	✗	✗	✗	✓
Offline / Air-Gapped	✗	✗	✗	✓
Self-Learning	✗	✗	✗	✓
Anti-Hallucination	✗	✗	✗	✓

THE STACK

RuvNet: The Complete Agentic Stack

Six integrated modules that turn AI models into production-grade autonomous systems.

RuvNet Unified Progressive 7-Layer Foundation

ARCHITECTURE

How It All Fits Together

Security first. Intelligence at every step. Continuous learning.

RVF: 3-Tier Compute

WASM (5.5KB) | eBPF (kernel bypass) | Unikernel (125ms boot)

Nervous System: 5 Bio-Inspired Layers

Sensing (<100ns) | Reflex (<1μs) | Memory | Learning | Coherence

PROOF Real Teams. Real Results.

Fox Flow

12.8M queries/sec

4,000x faster than Redis

Bill Sentry

30 years expertise

Healthcare AI in production

QE Fleet

51 autonomous agents

Across 12 domains

Finland Gov

National scale

First country-scale agentic AI

These aren't demos. These are production deployments.

ONLY WITH RUVNET

Your Data Never Leaves Your Building

How AI Works Today

- ✗ Every query sends data externally
- ✗ Trade secrets transmitted
- ✗ No audit trail
- ✗ Compliance blocks adoption

How RuvNet Works

- ✓ RuVector runs inside YOUR PostgreSQL
- ✓ AIMDS scans every input AND output
- ✓ RVF containers run air-gapped
- ✓ Cryptographic witness chains

HIPAA | GDPR | ITAR | SOC 2 | FedRAMP — compliant by architecture, not by policy

Full AI on Your Phone.

No Cloud. No

RVF cognitive containers shrink an entire AI application into a single file.

Backend.

WiFi Dense Pose — body mesh from radio signals, no cameras

Browser-Side AI — LLMs in WASM, zero server dependency

Docker: 50-500 MB | Container: 5-50 MB | RVF WASM: 5.5 KB (9,000x smaller)

Performance That Speaks For Itself

Measured results. Not theoretical. Not marketing.

Capability	RuvNet	Industry	Gap
SWE-Bench Score	84.8%	GPT-4o: 33.2%	2.5x
HNSW Vector Search	61µs	500ms+ (Pinecone)	8,000x
Stream Processing	12.8M QPS	Redis: 3K QPS	4,000x
Threat Detection	0.06ms	Rule-based: 10-50ms	833x
Real-Time Learning	<1ms, \$0	Days, \$1K-\$100K	Instant
WASM Runtime	5.5KB	50MB+ containers	9,000x

8,000x

Vector Search

4,000x

Stream Processing

9,000x

Smaller Runtime

TIMELINE

We Built the Future 8 Months Early

RuvNet doesn't follow the industry roadmap. The industry follows

RuVector

In-process vector search.
Industry still uses external DBs.

AIMDS

Chaos theory security.
Industry still uses rule-based WAFs.

RVF

5.5KB cognitive containers.
Industry still uses Docker.

SONA

Self-optimizing neural arch.
Industry uses static models.

Two standard deviations beyond state of the art. And it's free.

This Is Free — And That Should

BUSINESS MODEL

Terrify Your Competitors

Open source. MIT license. Zero licensing cost. The entire 148-rust stack.

Rust Crates

The Compound Advantage

Proprietary Training Data

Every interaction generates unique LoRA adapters.

Institutional AI Memory

Knowledge no competitor can copy.

Security Threat Intelligence

AIMDS learns from every attack.

Community Network Effects

Open source creates exponential adoption.

Every dollar your competitor spends on licensing, you invest in capability. The gap compounds daily.

INDUSTRIES

Intelligence at Every Endpoint

The entire vector search engine fits in 7.2 kilobytes. It runs in a browser tab.

DEPLOYMENT

Deploy Anywhere

Every deployment model. SOC 2, HIPAA, GDPR, ITAR compliant.

K8s

Cloud

HW

On-Premise

Hybrid

Cloud + On-Prem

RVF
