

RUFLO v3.5 — The Agentic Intelligence Platform

Powering the Next Generation of AI-Native Enterprise

BY RUVNET

The Enterprise AI Problem

Despite massive investment, enterprise AI initiatives are failing at scale — not from lack of ambition, but from lack of infrastructure.

85%

of AI projects never reach production

Millions Wasted

on fragmented, incompatible AI tooling

No Single Platform

connecting agents, memory, security, and deployment

Manual Everything

isolated models, no orchestration, no self-healing

The Opportunity

\$150B+

Total Addressable Market

Enterprise AI orchestration TAM by 2027 — and growing rapidly as agentic systems become mission-critical.

What Enterprises Actually Need

- **Autonomous agents that learn, adapt, and self-heal**
- **First-mover advantage in unified agentic intelligence**
- **Open-source core with enterprise-grade premium features**

What is Ruflo?

Ruflo v3.5 is a production-ready multi-agent orchestration platform (formerly Claude Flow) built for enterprises that need AI that works — reliably, securely, at scale.

1

60+ Agent Types

Specialized agents out of the box, ready to deploy

2

5 Swarm Topologies

Hierarchical, mesh, ring, star, and hybrid configurations

3

Built-in Security

AIMDS, AgentDB memory, and RuVector search — native

4

One Command Start

```
npx ruflo@latest init --wizard
```

The RuvNet Ecosystem

Ruflo is the orchestration layer of a deeply integrated, full-stack AI infrastructure ecosystem — purpose-built for enterprise deployment.

Ruflo v3.5

Agent orchestration — the brain of the platform

RuVector

Vector DB with 290+ SQL functions and HNSW indexing

AgentDB

Hybrid memory: episodic + semantic recall

AIMDS

3-layer AI Defense Middleware Suite

SONA

Self-Optimizing Neural Architecture — <0.05ms adaptation

RVF

Cognitive Container — self-booting AI packages with Ed25519 signing

📄 Plus 80+ Rust crates, 100+ MCP tools, and 150+ agent types across the platform.

The 4-Step Intelligence Pipeline

Ruflo's core intelligence loop transforms raw agent interactions into compounding, self-improving institutional knowledge.

Each cycle makes the system smarter — agents learn from every operation, continuously distilling knowledge without overwriting what they already know.

Swarm Intelligence Topologies

Hierarchical

Queen-led architecture with anti-drift and tight control for regulated environments

Mesh

Fully connected peer network for maximum parallelism and resilience

Hierarchical-Mesh (Recommended)

V3 queen + peer communication — best balance of control and speed

Fault Tolerance

Byzantine fault tolerance: tolerates $f < n/3$ faulty agents — the system keeps running even when nodes fail.

Consensus

Raft consensus protocol ensures **leader-based state management** with guaranteed consistency across the swarm.

Self-Healing Architecture

Ruflo doesn't just run agents — it watches over them, learns from them, and recovers them automatically.

12 Background Workers

Running continuously, monitoring every agent and operation in real time

Neural Pattern Training

Learns from successful operations and encodes recovery strategies automatically

PostgreSQL Heartbeats

Dead man's switch: silence equals failure — instant detection, instant recovery

Security — AIMDS

🛡️ AI DEFENSE MIDDLEWARE SUITE

Security is not an add-on in Ruflo. AIMDS is infrastructure — as foundational as HTTPS — automatically applied to every application.

RVF — The Cognitive Container

RVF is a revolutionary 24-segment binary format that packages AI as a completely self-contained, self-booting unit — deployable anywhere, with zero backend dependency.

- **All-in-one**

Bundles vectors, HNSW index, WASM runtime, model weights, and config in one file

- **Ultralight**

5.5KB WASM bootstrapper — runs natively in the browser

- **Tamper-Proof**

Ed25519 cryptographic signing ensures verified, trusted distribution

Market Traction

Ruflo is live, deployed, and growing — with real infrastructure, real data, and a rising open-source community.

103,755

Curated Entries

Live in the Ask-RuvNet knowledge
platform

173

GitHub Repos

Indexed and integrated across the
ecosystem

95/100

Quality Score

Grade A knowledge base benchmark
rating

 Production deployment live on Railway. Open-source community actively growing across all repositories.

Business Model

A multi-layered revenue architecture designed for viral adoption, enterprise conversion, and long-term platform lock-in.

Open Core

Free CLI drives adoption; premium enterprise features drive revenue

Enterprise

SSO, audit trails, SLA guarantees, and dedicated support

Platform

Marketplace for agent templates, skills, and community extensions

Services

Custom agent development, training programs, and consulting

Competitive Advantage

Ruflo doesn't compete at the edges — it wins at the center, where production-grade reliability, security, and intelligence converge.

Capability	LangChain	AutoGen	CrewAI	Ruflo v3.5
Security Layer	✗	✗	✗	✓ AIMDS 3-layer
Self-Healing	✗	✗	✗	✓ 12 workers
Swarm Topologies	1	1	1 (sequential)	✓ 5 topologies
Vector Search	Partial	✗	✗	✓ RuVector native
Time to Production	Weeks	Weeks	Days	✓ 10x faster

Product Roadmap

A disciplined, milestone-driven path from GA launch to fully autonomous, self-evolving agent ecosystems.

The Team

Deep Domain Expertise

Founded by RuvNet with concentrated expertise in AI systems, agentic architecture, and enterprise software at scale

Open-Source Contributors

Active contributors spanning 173+ repositories — a community built on transparency and technical rigor

Advisory Board

Enterprise AI and security specialists providing strategic guidance across product, go-to-market, and compliance

Our Philosophy

We build in the open. Every architecture decision, every design pattern, every lesson learned is shared with the community — because the future of AI infrastructure belongs to everyone.

The Ask

We are building the infrastructure layer for the agentic enterprise. We're looking for partners who see that future as clearly as we do.

Strategic Partners

Co-build the enterprise AI stack with RuvNet — shape the platform roadmap and go to market together

Early Enterprise Customers

Join our pilot program and deploy Ruflo inside your organization with white-glove onboarding and dedicated support
